CLOUD ADDRESS BOOK

ABOUT

Exadime, LLC is an US based IT company formed under the law of New Jersey State. We are a team of professionals dedicated to make things easier and simpler in our lives. As a part of it, we have built Cloud Address Book aka Contact Management System to manage & share contacts. As contacts grow in size and number, it becomes more difficult to skim through and find the right person at the right time. Our online address book software is here to detangle it all. This product comes with many distinct features that you may not find elsewhere. Contact with photo, contact history, trash, CSV data import or export, groups, sub groups, multiple address books, contact mapping across groups & address books, contact sharing, geodata auto fill, etc. The user interface is the simplest among you come across. The integration with Avery makes address printing on Avery labels. As this is a web based, no software installation required. It is available 24x7. It can be suitable for personal or business needs.

Plans

#	Name	Address Book	Group	Contact	Export Import	Ads	Price	Term
1	Free	1	10	100	No	Yes	$0	Monthly
2	Bronze	5	50	500	Yes	No	$4.99	Monthly

6	Diamond	100	1,000	10,000	Yes	No	$99.99	Monthly

FEATURES

MULTIPLE ADDRESS BOOKS

The cloud address book software comes with the option to use the primary address book or create multiple address books for various reasons. Contacts can be easily mapped between address books and every address book has standalone control that allows user to share a particular address book with read/write privilege or maintain personal address book, and more such options.

GROUPS & SUB GROUPS

The online address book can have multiple groups and sub-groups and so on. A contact will exist in the primary address book and can be mapped between groups and sub-groups and more sub-groups under them. This provides better control over contact management and one contact can easily be part of multiple groups or sub-groups without causing duplicate entries.

CONTACT WITH PHOTO

Users can store photograph of the contact along with contact information. For better security, these photograph files are encrypted with strong encryption mechanism at the disk level in the system.

CONTACT HISTORY

Exadime stores the user's activities related to contact. This helps the user to check the past records related to the contact. It's like the contact version; you can check all the versions of the contact through the application.
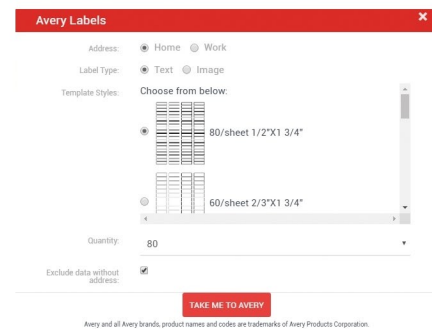

TRASH

Forget deleting a contact by accident and regretting it the next instant. Exadime cloud based address book never deletes any contact permanently the moment you delete the contact from the address book. It moves the contact to trash. So, if you wish to restore deleted contacts, you can always check the trash and do so. Moreover, you can manually delete the contacts from trash permanently.

CONTACT SHARING & MAPPING

Contacts can be mapped among multiple address books and groups. This eliminates the need to duplicate the contacts in different address books. Also contacts can be shared with anyone while providing specific privilege and rights. There are options available to the user to share contact with read/write/share privilege and user can select as required. It allows better contact management and contact sharing between teams and depart ments.

CSV DATA IMPORT OR EXPORT

Exporting or importing contact is a lot easier with the CSV compatibility. Users can easily transfer entire contact database stored in CSV format (MS Excel file) to the Exadime cloud-based online address book by simply uploading the entire file into the address book. In case the contact list needs to be taken elsewhere and accessed offline, the entire contact database can be downloaded in CSV format as well. CSV is extremely compatible with almost all contact management software available and offers flexibility and freedom.

ADDRESS LABEL PRINTING

Print any saved contact address at any time. Access web address book and simply print the desired contact address. There are multiple printing options available:

Avery Labels: Our web address book is integrated with Avery so that users can use available Avery templates, design and print address labels. This is a good choice for business letters, party invitations and more of such direct mail communication.

Custom Labels: Our built-in custom label printing comes with multiple customization options. User can select the desired paper size, quantity, template, border, and print the custom address labels.

GEO DATA AUTO FILL

Site provides auto fill for GEO data such as Street, City, State or Country. This eliminates misspelt city or street names in contact address and later getting trouble in searching them when needed.
